

### **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application.

#### **Listing of Claims:**

Claim 1 (Original): A mountable display screen filter system comprising:

a display screen filter;

an adhesive hinge to adhere to a housing of a display screen and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner; and

a clasp to adhere to the housing and hold a second side of the display screen filter adjacent the housing without adhering to the display screen filter.

Claim 2 (Original): The mountable display screen filter system of claim 1, further comprising a plurality of clasps.

Claim 3 (Original): The mountable display screen filter system of claim 1, wherein the clasp removably holds the second side of the display screen filter adjacent the housing such that the display screen filter can be removed from the clasp and moved in an arc about the adhesive hinge.

Claim 4 (Original): The mountable display screen filter system of claim 1, wherein the clasp comprises a rigid member including an adhesive over a first portion of the member to adhere to the housing and substantially no adhesive over a second portion to hold the second side of the display screen filter adjacent the housing without adhering to the display screen filter.

Claim 5 (Original): The mountable display screen filter system of claim 1, wherein the clasp comprises a first member including an adhesive to adhere to the housing and a second member to hold the second side of the display screen filter adjacent the housing without adhering to the display screen filter, wherein the second member is attached to the first member.

Claim 6 (Original): The mountable display screen filter system of claim 5, wherein the second member rotates relative to the first member to hold or release the second side of the display screen filter adjacent the housing.

Claim 7 (Original): The mountable display screen filter system of claim 1, wherein the clasp comprises a memory material that distorts from an original shape to release the second side of the display screen filter and returns to the original shape to hold the second side of the display screen filter adjacent the housing.

Claim 8 (Original): The mountable display screen filter system of claim 1, wherein the clasp comprises a pre-molded portion of the housing.

Claim 9 (Original): The mountable display screen filter system of claim 1, wherein the adhesive hinge comprises a rigid substrate with a layer of adhesive material coated on one side of the substrate.

Claim 10 (Original): The mountable display screen filter system of claim 9, wherein the rigid substrate comprises a metal.

Claim 11 (Original): The mountable display screen filter system of claim 9, wherein the rigid substrate comprises a plastic.

Claim 12 (Original): The mountable display screen filter system of claim 1, wherein the adhesive hinge includes alignment marks near opposing edges of the adhesive hinge for aligning the display screen filter relative to the housing.

Claim 13 (Original): The mountable display screen filter system of claim 12, wherein the adhesive hinge includes a source identifier.

Claim 14 (Original): The mountable display screen filter system of claim 1, wherein the adhesive hinge includes a crease substantially along a major axis of the adhesive hinge.

Claim 15 (Original): The mountable display screen filter system of claim 14, wherein the crease substantially along the major axis of the adhesive hinge corresponds to a bezel of the housing.

Claim 16 (Original): The mountable display screen filter system of claim 14, wherein the crease comprises a score.

Claim 17 (Original): The mountable display screen filter system of claim 1, wherein the display screen filter consists of a filter selected from the following group: a privacy filter; a clear protection filter, an anti-glare filter, a polarization filter, a radiation reduction filter, an ultraviolet radiation filter, an anti-reflection filter and a contrast enhancement filter.

Claim 18 (Original): The mountable display screen filter system of claim 1, wherein the system comprises an after-market addition to a computer display.

Claim 19 (Original): The mountable display screen filter system of claim 17, wherein the computer display comprises a liquid crystal display (LCD).

Claim 20 (Original): The mountable display screen filter system of claim 1, wherein the display screen filter comprises a frameless display screen filter.

Claim 21 (Original): A system comprising:

a computer display including a housing and a display screen viewable through an opening in the housing; and

a display screen filter mounted on the housing over the display screen via an adhesive hinge that adheres to the housing and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner, and a clasp that adheres to the housing and holds a second side of the display screen filter adjacent the housing without adhering to the display screen filter.

Claim 22 (Original): The system of claim 21, wherein the clasp removably holds the second side of the display screen filter adjacent the housing such that the display screen filter can be removed from the clasp and moved in an arc about the adhesive hinge.

Claim 23 (Original): The system of claim 21, wherein the clasp comprises a rigid member including an adhesive over a first portion of the member to adhere to the housing and substantially no adhesive over a second portion to hold the second side of the display screen filter adjacent the housing without adhering to the display screen filter.

Claim 24 (Original): The system of claim 21, wherein the clasp comprises a first member including an adhesive to adhere to the housing and a second member to hold the second side of the display screen filter adjacent the housing without adhering to the display screen filter, wherein the second member is attached to the first member.

Claim ~~24~~25(Currently Amended): The system of claim 24, wherein the second member rotates relative to the first member to hold or release the second side of the display screen filter adjacent the housing.

Claim 26 (Original): The system of claim 21, wherein the clasp comprises a memory material that distorts from an original shape to release the second side of the display screen filter and returns to the original shape to hold the second side of the display screen filter adjacent the housing.

Claim 27 (Original): The system of claim 21, wherein the clasp comprises a pre-molded portion of the housing.

Claim 28 (Original): The system of claim 21, wherein the adhesive hinge comprises a rigid substrate with a layer of adhesive material coated on one side of the substrate.

Claim 29 (Original): The system of claim 21, wherein the adhesive hinge includes alignment marks near opposing edges of the adhesive hinge for aligning the display screen filter relative to the housing.

Claim 30 (Original): The system of claim 21, wherein the adhesive hinge includes a crease substantially along a major axis of the adhesive hinge.

Claim 31 (Original): The system of claim 21, wherein the display screen filter consists of a filter selected from the following group: a privacy filter; a clear protection filter, an anti-glare filter, ultraviolet radiation filter, a polarization filter, a radiation reduction filter, and a contrast enhancement filter.

Claim 32 (Original): A method comprising:

aligning a display screen filter relative to a computer display, the computer display including a housing and a display screen viewable through an opening in the housing;

adhering an adhesive hinge to the housing and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner; and

adhering a clasp to the housing to hold a second side of the display screen filter adjacent the housing without adhering the clasp to the display screen filter.

Claim 33 (Original): The method of claim 32, wherein aligning the display screen filter relative to the computer display comprises aligning the display screen filter relative to the housing with the adhesive hinge, the adhesive including alignment marks near opposing edges of the adhesive hinge.

Claim 34 (Original): The method of claim 32, wherein the adhesive hinge includes a crease substantially along a major axis of the adhesive hinge, the method further comprising aligning the crease relative to a bezel of the housing.

Claim 35 (Original): The method of claim 32, wherein adhering the adhesive hinge to the housing and the first side of the display screen filter comprises applying pressure to the adhesive hinge to form an adhesive bond with the housing and the first side of the display screen filter.

Claim 36 (Original): The method of claim 32, further comprising operating the clasp to removably hold the second side of the display screen filter adjacent to the housing such that the display screen filter can be removed from the clasp and moved in an arc about the adhesive hinge.

Claim 37 (Original): The method of claim 32, wherein the clasp comprises a rigid member including an adhesive over a first portion of the member to adhere to the housing and substantially no adhesive over a second portion, the method further comprising placing the second side of the display screen filter between the second portion of the clasp and the display screen to hold the display screen filter adjacent to the housing without adhering the clasp to the display screen filter.

Claim 38 (Original): The method of claim 32 wherein the clasp comprises a first member including an adhesive to adhere to the housing and a second member attached to the first member, the method further comprising placing the second side of the display screen filter between the second member of the clasp and the display screen to hold the display screen filter adjacent to the housing without adhering the clasp to the display screen filter.

Claim 39 (Original): The method of claim 38, further comprising rotating the second member relative to the first member to hold or release the second side of the display screen filter adjacent the housing.

Claim 40 (Original): The method of claim 32, wherein the clasp comprises a memory material, the method further comprising distorting the clasp from an original shape to release the second side of the display screen filter and releasing the clasp to return to the original shape and hold the second side of the display screen filter adjacent the housing.

Claim 41 (Currently Amended): A mountable display screen filter system comprising:  
a display screen filter; ~~and~~  
an adhesive hinge to adhere to a housing of a display screen and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner, wherein the adhesive hinge is formed with a crease substantially along a major axis of the adhesive hinge; and  
a clasp to adhere to the housing and hold a second side of the display screen filter adjacent the housing without adhering to the display screen filter.

Claim 42 (Original): The mountable display screen filter system of claim 41, wherein the crease substantially along the major axis of the adhesive hinge corresponds to a bezel of the housing.

Claim 43 (Original): The mountable display screen filter system of claim 41, wherein the crease comprises a score.

Claim 44 (Original): The mountable display screen filter system of claim 41, wherein the adhesive hinge includes alignment marks near opposing edges of the adhesive hinge for aligning the display screen filter relative to the housing.

Claim 45 (New):      A mountable display screen filter system comprising:

- a display screen filter;
- an adhesive hinge to adhere to a housing of a display screen and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner; and
- a clasp including a first member with an adhesive to adhere to the housing and a second member to hold a second side of the display screen filter adjacent the housing without adhering to the display screen filter, wherein the second member is attached to the first member and the second member rotates relative to the first member to hold or release the second side of the display screen filter adjacent the housing.

Claim 46 (New):      A mountable display screen filter system comprising:

- a display screen filter;
- an adhesive hinge to adhere to a housing of a display screen and a first side of the display screen filter such that the first side of the display screen filter is attached to the housing in a hinged manner; and
- a clasp that comprises a pre-molded portion of the housing to hold a second side of the display screen filter adjacent the housing without adhering to the display screen filter.
